DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 9 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The claim calls for a device to determine the alcoholic concentration/strength of a fluid. However, there is nothing in the claim that discloses how anything is "determined". The claim currently has a heating device that heats a predetermined amount of a fluid and a detection and control circuitry to control the heating of the device and obtain data relating to the liquid evaporation. However, there is nothing that tells on of ordinary skill in the art what to do with the information obtained. This is an essential part of the determining process that is currently omitted from the claim.

Allowable Subject Matter

3. Claims 1-8 are allowed.
4. Claims 10-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2856

5. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not disclose nor deem obvious a process or apparatus to determine alcoholic strength of a water/alcohol solution where you use a heating device in order to cause a partial or full evaporation of a predetermined quantity of the solution and determining the concentration using the total energy necessary, time required for evaporation, or the integral of temperature over time, in combination with all other limitations of the independent claim 1. Claim 1 specifically requires a magnitude of one of the three measurements being indicative of the alcoholic concentration, thus there is a determination of alcoholic concentration made.

6. Claim 9 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The examiner has cited various references that are deemed relevant to the general state of the art of the present invention.
